

Web Portal

The web portal is generally the richest interface in terms of features and visual impact. Users can subscribe to the service, manage all their settings, access the [storefronts](#) to purchase or send gifts, etc. via a user friendly graphic interface.

Over the friendly and intuitive web portal, each subscriber has access to all the content in his inbox. He/she has an overview of assigned and not assigned tones and can use all the features for [customized ring back playing](#).

You choose whether to let us develop this portal for you based on our standard design tailored to your corporate identity. The web portal interfaces with our system via a SOAP-based API. You have the option to receive the HTML code and this interface, so that you or a third-party can enhance the portal regularly to keep your subscribers interested and make new campaigns. You can also opt to do your web portal yourself or via a third party of your choice. You can not only get the API, we can also provide a software development kit that makes it easy to develop, simulate and test your own web portal. You do not need an Off Deck Gateway or any proprietary programming skills.

[Contact us](#) to learn more about our web portal for ring back tones.
